

A LIVE BUILD SESSION

Beyond Prompting

Building with AI for small business. Not the prompts. The *machine* that runs the back office while you sleep.

START HERE

There's a gap between **using** AI and AI **doing** the work.

Most people have used AI to write a caption, an email, a post. Far fewer have an AI tool that actually ran a part of their business for them, while they slept.

That gap is the whole reason for tonight.

WHY ME

Fifteen years building other people's operations.

Multimillion-dollar budgets. Teams across five continents. Then a course teaching software engineers how AI systems actually work, the real machinery behind the tools. Now that same infrastructure, built for small businesses.

01

I build it

Not slideware.
Real systems that ship.

02

Enterprise ops

For businesses our size.

03

I taught the AI

No guessing on what it can do.

CYNTHIA JONES · FOUNDER

THE REFRAME

*Most AI talk is about the
front of your business.
More followers. More leads.
More customers at the
door.*

*My work starts the
moment they walk through
it.*

*"She fills the top of the funnel. I build the machine that keeps the bottom
from leaking."*

THE STAKES

More customers without
a system underneath
isn't growth.
It's just a bigger fire.

SHOW, DON'T TELL

Two real businesses.

Not demos. Not mockups. Systems running right now for a Georgia bakery and a wellness coach.

Twenty years of demand. No system.

Orders in her DMs. Capacity in her head. Turning away business she couldn't track.

01 **A live order form with a capacity tracker**

She never over-commits her oven again. The system says when she's full.

02 **Standing orders that run themselves**

Her regulars get a text every Thursday, the order processes automatically.
Guaranteed weekly revenue on autopilot.

03 **No monthly subscription**

She owns it. The software and the data are hers.

Real brand. Real following. All of it in her head.

Everything ran on her phone and her memory.

01 **A client portal**

Her whole coaching relationship in one place: intake, sessions, progress, contracts.

02 **One-click enroll**

An application comes in, the right emails go out automatically. Turning an applicant into a client takes one click instead of a week.

03 **She got her hours back**

From running her practice in her head to running it from a dashboard.

WHAT THIS MEANS FOR YOU

Built, not rented. And finally affordable.

These aren't apps they rented. They were built for the specific business, the owner owns them, and they're designed to run without her touching every piece.

Custom software used to cost fifty thousand dollars and a development team. AI is what makes building this for a small business affordable now. That's the real headline. You can finally own infrastructure that used to be only for big companies.

WHERE TO START

You don't need all of it at once.

It starts with one question:
where is your business breaking?

We find that first. Then we build the one thing that fixes it.

AN IDEA I'M TESTING

A small hands-on series.

A few of us, building one real system together over a few weeks. Not a lecture. A build.

If that sounds useful, find me after and tell me. I'm listening for whether there's appetite for it.

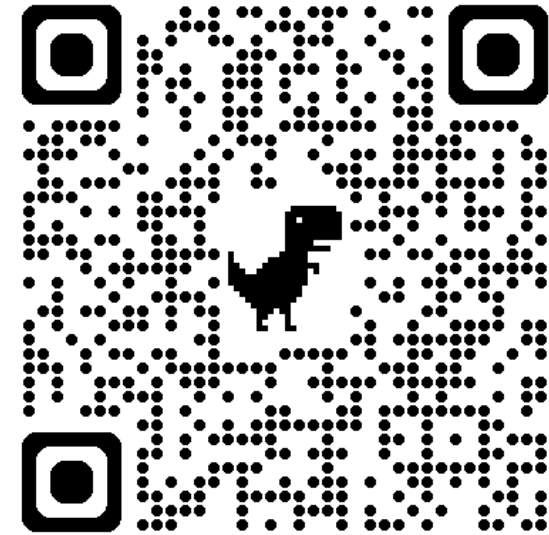

THE ASK

If your business is
running you,
let's fix that.

A free 45-minute discovery call. We sit down, I help
you see where the gaps are. No pitch.

The code books it. Grab a slot tonight.
